PROFILE

I'm Tanvir Rahman, an IT graduate based in Launceston, Tasmania. I bring software development experience, applied data analysis and the communication skills to connect technical work with the people who use it. I want to contribute to Tasmania through useful software, better-informed decisions and patient technology support. My aim is to help people build digital confidence while continuing to develop my skills in software, data and systems.

SKILLS

Software Development: Python | Pandas | Scikit-learn | Clustering | Time Series Forecasting | Jupyter | PHP | PHP-ML | Raspberry Pi / Sense HAT | IoT | PHP & Laravel | JavaScript & Vue.js | REST API Development | Git & GitHub

Data, Analytics & Reporting: SQL & Query Optimisation | Data Validation | SAP Reporting | Excel Reporting | Data Analytics | Statistical Analysis | Machine Learning

Systems & Customer Service: Incident Investigation | Software Troubleshooting | Software Testing & QA | Operational Systems | Customer Service | User Training & Documentation

Product & Delivery: Accessibility & UX | Agile Delivery | Cloud Deployment | Docker | Vercel

EXPERIENCE

Customer Service Officer | Aurora Energy, Launceston

Oct 2026 - Present

Support Tasmanian customers with account and service enquiries, combining clear explanations, accurate records and careful handling of customer information.

- Clarify customer enquiries and explain account information and practical next steps in accessible language.
- Handle account information in line with relevant legislation, policies and procedures.
- Record customer interactions accurately so follow-up is informed and service remains consistent.

Software Developer Intern | Active Work Laboratory, University of Tasmania

Feb 2025 - Jun 2025

Contributed to ExerTime during a University of Tasmania research placement, improving how research users navigate and interact with the digital health platform.

- Refined Vue.js interfaces and navigation across key platform workflows.
- Addressed accessibility and interaction issues with attention to research users' needs.
- Participated in sprint planning and code reviews, and restructured components for clearer, more maintainable code.

Software Developer | Business Automation Ltd, Bangladesh

Jan 2020 - Dec 2022

Developed and maintained features for enterprise and government applications, working across application code, database queries and quality assurance.

- Implemented application features using PHP, Laravel, JavaScript, Vue.js and SQL.
- Reviewed database queries and application components to address performance and reliability concerns.
- Worked with QA colleagues to test changes, investigate defects and prepare features for delivery.

Fresh Produce Team Member | Coles, Tasmania

2023 - 2026

Supported daily retail operations through stock checks, SAP reporting, device troubleshooting and guidance for colleagues.

- Guided colleagues through stock-management procedures and handheld-device workflows.
- Investigated handheld-scanner and operational-system issues affecting daily tasks.
- Cross-checked SAP reports, gap scans and stock records to investigate inventory and pricing discrepancies.

EDUCATION

Master of Information Technology and Systems | University of Tasmania

Jun 2023 - Jun 2025

Specialised in Artificial Intelligence and Cybersecurity. Graduated with a GPA of 6.75/7 and recognition on the University Roll of Excellence in 2025. Applied coursework through projects in machine learning, data analysis, IoT and web development.

Bachelor of Business Information Technology | University of Greenwich

Jan 2015 - Jan 2019

Studied systems analysis, database management and business information technology, building a foundation for understanding how software and data support organisational processes and decisions.

PROJECTS

Weather Prediction Dashboard

IoT & Machine Learning Project | 2026

Built a weather dashboard and JSON prediction endpoint connecting a Raspberry Pi Sense HAT workflow with temperature and humidity information for five Tasmanian locations. Integrated a 10-day Open-Meteo forecast, a PHP-ML seasonal fallback and precomputed historical charts. Documented the synthetic 2022-2026 data extension and distinguished model fit from real-world forecast accuracy.

Tools: PHP | PHP-ML | Raspberry Pi / Sense HAT | IoT | Docker | Vercel

Live dashboard | Repository and methodology

Global Health Analytics

Global Health & Data Analytics Project | 2026

Analysed maternal mortality and life expectancy across 207 countries using Python, Pandas and Scikit-learn. Compared K-Means and Ward clustering, then evaluated forecasting baselines against later observations. Persistence produced the lowest held-out error for both indicators; executable notebooks and a public dashboard explain the methods, findings and limitations.

Tools: Python | Pandas | Scikit-learn | Clustering | Time Series Forecasting | Jupyter

Live dashboard | Repository and methodology

Melbourne Airport Operational Efficiency Analysis

Data Analytics Project | 2025

Investigated luggage-handling performance across four Melbourne Airport terminals using Python. Applied Kruskal-Wallis, Dunn post-hoc, paired t-tests and ANOVA to compare performance across terminals and time periods. Presented the analysis and operational recommendations in a repository that makes the methods available for review.

Tools: Python | Data Analytics | Statistical Analysis

Repository and methodology

ExerTime Platform

UTAS Placement | 2025

Improved interface components, navigation and accessibility on the ExerTime digital health platform during my University of Tasmania placement. Contributed Vue.js updates and component restructuring through sprint planning, code reviews and iterative delivery. The work connected front-end development with the needs of health researchers and academic stakeholders.

Tools: JavaScript & Vue.js | Accessibility & UX | Agile Delivery
