PROFESSIONAL SUMMARY

IT graduate recognised on the University of Tasmania Roll of Excellence, with a live cloud-deployed machine learning system achieving R^2 0.84 and a health platform improvement that cut user navigation time by 20%. Has analysed government and international datasets across 190+ countries, delivered operational efficiency analysis across real infrastructure data, and built end-to-end systems spanning machine learning, backend, and cloud deployment. Combines hands-on capability across data & AI, cyber security, and systems analysis with strong written and verbal communication skills — focused on translating technical findings into clear, actionable outcomes for organisations in utilities, government, and technology sectors.

TECHNICAL SKILLS

Programming	Python · PHP · JavaScript
Data & AI	Machine Learning · Data Analytics · Statistical Analysis · Predictive Modelling · Data Visualisation · SQL
Cloud & Platforms	Cloud Deployment · REST APIs · Git · Linux · Windows
Databases	MySQL · MongoDB · Query Optimisation
Cyber Security	Secure Coding · Risk Assessment · Data Protection · IoT Security · Vulnerability Awareness
Methods	Agile · SDLC · Stakeholder Engagement · Digital Transformation · Systems Analysis · Problem-Solving · Collaboration

EDUCATION

Master of Information Technology and Systems June 2023 – June 2025
University of Tasmania

- Specialised in Cyber Security, Artificial Intelligence, and Data Analysis
- Completed applied projects across IoT systems, machine learning pipelines, big data analytics, and web development

Bachelor of Business Information Technology January 2015 – January 2019
University of Greenwich

- Studied systems analysis, process improvement, database management, and IT-enabled business operations

PROJECTS

IoT Weather Prediction Dashboard <https://github.com/mdrTanvir/Weather-Prediction-Dashboard>

- Built a full-stack IoT system integrating a sensor device, machine learning server, and live dashboard — comparing real-time sensor data against forecasts across 5 Tasmanian sites using 10+ years of Bureau of Meteorology data, achieving R^2 0.82–0.84
- Designed and built data visualisation layer for the live dashboard; deployed end-to-end pipeline from local development to production cloud hosting

Sustainable Development Goals Global Health Analytics <https://github.com/mdrTanvir/SDG-Health-Analytics>

- Applied Linear Regression trained on historical health indicators → Goal 3 Achievement Level across 190+ countries using WHO and UN data (mean CV $R^2 \approx 0.97$) — worked with real government and international organisation datasets

Melbourne Airport Operational Efficiency Analysis

<https://github.com/mdrTanvir/Melbourne-airport-efficiency-analysis>

- Quantitative statistical analysis of luggage handling across 4 terminals (730 days, 2018–2019) — applied Kruskal-Wallis, Dunn's post-hoc, paired t-tests, and ANOVA to identify terminal inefficiencies; T3 handling time improved ~12% year-on-year, findings translated into clear operational recommendations

EXPERIENCE

Software Developer Intern

February 2025 – June 2025

Active Work Laboratory, University of Tasmania

- Improved the ExerTime digital health platform for real-world research use, reducing user navigation time by ~20% through targeted interface and system enhancements
- Applied user-centred design thinking to resolve accessibility gaps on a live platform serving health researchers and academic stakeholders
- Contributed to agile development cycles — sprint planning, code reviews, iterative delivery; collaborated closely with cross-functional team members throughout
- Restructured system components to improve code quality and reduce future maintenance effort

Software Developer

January 2020 – December 2022

Business Automation Ltd. · Enterprise & Government Technology, Bangladesh

- Delivered software features for enterprise and government client applications in production — direct exposure to government sector technology delivery
- Optimised database queries and system architecture, improving responsiveness and reliability under high-volume load
- Collaborated with quality assurance teams through structured testing cycles, strengthening platform resilience and reducing defect rates

Customer Service Team Member

September 2023 – Present

Coles Supermarket, Hobart

- Managed ~100+ customer interactions per shift — professional communication, problem-solving under pressure, and collaboration across teams transferable to client-facing professional roles

AWARDS & ACADEMIC EXCELLENCE

University Roll of Excellence · University of Tasmania (2025) — highest academic performance

GPA 6.75 / 7.00 · Master of Information Technology and Systems

LEADERSHIP & ACTIVITIES

Class Representative · Elected, Multiple Terms

University of Tasmania

- Elected by classmates to represent student interests and act as liaison with academic staff — resolving concerns, improving communication, and advocating for the cohort
- Developed stakeholder management, written communication, and leadership skills applicable to client-facing roles

Member · Technology & Computing Society & Futsal Club

University of Tasmania

- Engaged in technology events and peer learning on emerging tech (AI, cloud, data), collaborating across diverse technical disciplines
- Competed in team-based sport — developing teamwork, discipline, and the ability to collaborate under pressure

ADDITIONAL INFORMATION

- Full working rights in Australia
- Registration to Work with Vulnerable People (RWVP) holder
- Located in Hobart, TAS — open to relocation across Tasmania
- Full Australian driver's licence
