PROFILE

IT graduate with software development experience at Business Automation Ltd and a University of Tasmania placement on the ExerTime digital health platform. Practical skills include PHP, Laravel, JavaScript, Vue.js, SQL and Python analytics, supported by customer service and operational systems experience. Master of Information Technology and Systems, specialising in Artificial Intelligence and Cybersecurity; GPA 6.75/7 and University Roll of Excellence (2025). Committed to helping Tasmanian communities build digital confidence.

TECHNICAL SKILLS

Development: PHP, Laravel, JavaScript, Vue.js, REST APIs, SQL, query optimisation, Git and GitHub.

Data: Python, Pandas, Scikit-learn, Jupyter, clustering, statistical analysis and time-aware forecast evaluation.

Systems and delivery: Troubleshooting, SAP operational reporting, data validation, user guidance, software testing, accessibility and agile delivery. Project deployment with Docker and Vercel.

TECHNICAL EXPERIENCE

Software Developer Intern | Active Work Laboratory, University of Tasmania

February 2025 - June 2025

- Improved the ExerTime digital health platform through interface, navigation and accessibility enhancements for research users.
- Contributed to sprint planning, code reviews and iterative delivery; restructured front-end components for maintainability.

Software Developer | Business Automation Ltd, Bangladesh

January 2020 - December 2022

- Delivered features for enterprise and government client applications using PHP, Laravel, JavaScript, Vue.js and SQL.
- Optimised database queries and application components for responsiveness and reliability.
- Worked with quality assurance colleagues through structured testing and cross-functional delivery.

EDUCATION

Master of Information Technology and Systems | University of Tasmania

June 2023 - June 2025

- Specialisations: Artificial Intelligence and Cybersecurity. GPA: 6.75/7. University Roll of Excellence, 2025.

Bachelor of Business Information Technology | University of Greenwich

January 2015 - January 2019

- Foundation in systems analysis, database management, process improvement and business information technology.

PROJECTS & PRACTICAL EXPERIENCE

SELECTED PROJECTS

Global Health Analytics

Python | Pandas | Scikit-learn | Jupyter

- Analysed maternal mortality and life expectancy data; compared K-Means and Ward clustering across 207 countries.
- Compared persistence and linear-trend forecasting using a per-country temporal holdout. Persistence had the lowest held-out mean absolute error for both indicators.
- Published executable notebooks and a public research dashboard, documenting methods and limitations.

Live dashboard | Repository and notebooks

IoT Weather Prediction Dashboard

PHP | PHP-ML | Raspberry Pi Sense HAT | Docker

- Built a dashboard and JSON prediction endpoint for five Tasmanian locations, with a Sense HAT client workflow.
- Integrated Open-Meteo forecasts and a PHP-ML seasonal-regression fallback for temperature and humidity displays.
- Used a precomputed historical chart cache. Documented the synthetic dataset extension and the limits of in-sample model scores.

Live dashboard | Repository and methodology

Melbourne Airport Operational Efficiency Analysis

Python | Statistical analysis

- Compared luggage-handling performance across four terminals using Kruskal-Wallis, Dunn post-hoc, paired t-tests and ANOVA.
- Documented findings and operational recommendations as an analytical project.

Repository and analysis

CUSTOMER SERVICE AND SYSTEMS EXPERIENCE

Customer Service Officer | Aurora Energy, Launceston

October 2026 - Present

- Handle customer account and service enquiries, communicate practical next steps and document interactions accurately.
- Follow relevant policies and procedures when handling customer and account information.

Fresh Produce Team Member | Coles, Tasmania

2023 - 2026

- Used SAP operational reports, gap scans and stock checks to investigate inventory and price discrepancies.
- Supported colleagues with stock processes and handheld devices; troubleshot day-to-day operational system issues.

COMMUNITY FOCUS

Interested in applying software, data and user support skills to practical problems in Tasmania and beyond. Focused on clear communication, reliable systems and helping people use technology confidently.
